MILITARY

One unique feature to L A Aluminum's castings are cast-in threaded steel inserts. The inserts eliminate tapped and threaded holes. The inserts give better strength and material properties to critical sealing surfaces. Casting-in threaded inserts saves machining time, and reduces the final cost to the customer.

L A Aluminum Casting Company has been making castings for military applications for over 60 years. The castings provide strength, corrosion resistance, consistency, and meet all current military specifications for commercial grade permanent mold aluminum castings.

Our products can be found on 210,000 gallon, 50,000 gallon, 20,000 gallon, 10,000 gallon, 5,000 gallon, and 3,000 gallon fuel tanks. We make 2" LAT's, 4" LAT's and 6" LAT's. Our company makes several other fittings for fuel cells and fuel tanks. Camlock type fittings, caps, and plugs are all manufactured to meet military specifications.

Some of the military specifications LA Aluminum consistently meets or exceeds are:

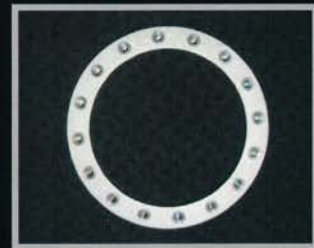

SPECIFICATIONS AND STANDARDS

MIL-A-8625F
MIL-C-5541 E
TTC 490 E
MIL-H-6088 G
AMS 2771
